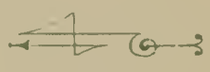
EVERGREENS

Evergreens make the most attractive decoration for your home grounds. They are beautiful at all seasons of the year—summer and winter, and if properly selected and arranged as to color of foliage and habit of growth, they will be very satisfactory.



Five reasons why Evergreens have not always proved a success.

(1) Poor Selection of Varieties.

We can help you make the proper choice for your individual conditions.

(2) Not Hardy in This Vicinity.

We grow only the hardy varieties, thus assuring you of plants that will stand the severe winters.

(3) Not Adapted to Soil and Other Conditions Here.

We have been growing Evergreens in Syracuse for 35 years. We have learned from experience the varieties that give the most satisfaction in this locality.

(4) Not Properly Grown in the Nursery, as to Transplanting, Root Pruning and Shearing.

Our Evergreens are transplanted and root pruned every three years. They are sheared once or more each season. The plants are thus assured of plenty of fiber roots and are good and bushy.

(5) Dried Out Condition Before or After Planting.

The roots of Evergreens should never be exposed to the sun or wind. If allowed to dry out for only a short time, the sap in the roots become hard and the plant dies. Our Evergreens are very carefully dug with a ball of soil and delivered the same day and if planted at once and kept well watered will be very sure to grow.

ARBORVITAE (Thuja)

American. Very hardy and very useful in landscape plantings. Fine for hedges and windbreaks.
